PROFESSIONAL SUMMARY

Fresh BTech Data Science graduate with 7 months of hands-on ML engineering experience building end-to-end machine learning pipelines, deploying REST APIs, and developing deep learning and NLP models. Proficient in **Python, Scikit-learn, PyTorch, XGBoost, and SQL** with strong foundations in **model development, evaluation, and deployment**. Certified in Generative AI and AI fundamentals. Seeking a Machine Learning Engineer role at Infosys to apply practical ML skills and grow within a large-scale engineering environment.

TECHNICAL SKILLS

ML & Algorithms	XGBoost, LightGBM, CNNs, Logistic Regression, Decision Trees, Random Forest, SVM
Deep Learning	PyTorch, CNNs, image classification, MNIST digit recognition, model tuning
NLP	Word2Vec, Gensim, text preprocessing, sentiment analysis, feature extraction
Programming	Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn), SQL, JavaScript
Data Engineering	ETL pipelines, data wrangling, EDA, feature engineering, SMOTE, data cleansing
Model Deployment	Flask, FastAPI, REST API development, MySQL, Postman, batch processing
Visualization	Power BI, Tableau, Excel
Tools	Git, Jupyter Notebook, VS Code, Agile methodology, technical documentation

EXPERIENCE

Machine Learning Trainee

October 2025 – April 2026

Gradious, Madhapur, Hyderabad

- Designed and built an **end-to-end ML pipeline** for employee turnover risk prediction using **XGBoost and LightGBM**; applied SMOTE for class imbalance, achieving **more than 85% accuracy and F1 score** across training and validation sets.
- Engineered a scalable **NLP pipeline** using Word2Vec and Gensim for sentiment extraction and insight summarization from a large unstructured product review dataset — covering tokenization, vectorization, and model-ready feature generation.
- Developed and tuned **Convolutional Neural Networks (CNNs) in PyTorch** for image classification and handwritten digit recognition (MNIST); performed systematic hyperparameter tuning and model evaluation across multiple epochs.
- Conducted end-to-end **EDA and classification modeling** for a customer churn prediction system; engineered behavioral features, trained multiple classifiers, and evaluated performance using precision, recall, and F1 metrics.
- Productionized an ML-ready REST API** using Flask and MySQL with search, pagination, and strict error handling; validated all endpoints via Postman, simulating a real-world model serving and deployment workflow.
- Delivered ML findings via **interactive Power BI and Tableau dashboards**, translating model outputs into clear business insights for non-technical stakeholders.

Trainee Front-End Developer

October 2024 – March 2025

Mithya IT Services (OPC) Pvt. Ltd., Banjara Hills, Hyderabad

- Built and deployed responsive web applications using modern frontend frameworks; collaborated in an **Agile team environment** with structured code reviews, documentation, and sprint-based delivery.
- Applied consistent coding standards and contributed technical documentation — practices transferable to ML engineering codebases and model lifecycle documentation.

Trainee Software Developer

May 2024 – August 2024

Mithya IT Services (OPC) Pvt. Ltd., Banjara Hills, Hyderabad

- Gained foundational experience in **full-stack development, API integration, and structured data handling**; worked independently on assigned modules while adhering to team development guidelines.

KEY PROJECTS

- Workforce Engagement Prediction (XGBoost + LightGBM):** Full ML lifecycle — data ingestion, feature engineering, SMOTE balancing, model training, evaluation, and Power BI dashboard delivery. Achieved $\geq 85\%$ accuracy.
- NLP Sentiment Analysis Pipeline (Word2Vec + Gensim):** End-to-end text ML pipeline processing large unstructured review data; covers tokenization, embedding, sentiment scoring, and insight extraction.
- CNN Image Classifier (PyTorch):** Built and tuned deep learning models for MNIST and image classification; applied systematic evaluation across training runs with performance benchmarking.

- **Customer Churn Prediction:** EDA-driven feature engineering and multi-classifier comparison for churn risk identification; evaluated using standard classification metrics.
- **Books REST API (Flask + MySQL):** Production-style API with batch processing, search, pagination, and Postman-validated error handling — modeled on real ML model serving patterns.

EDUCATION

Bachelor of Technology – Data Science

July 2022 – May 2025

Malla Reddy Institute of Engineering and Technology, Hyderabad

Diploma – Electrical and Electronics Engineering

May 2019 – June 2022

VNR Vignanajyothi Institute of Engineering & Technology

CERTIFICATIONS
